

## Vendita Database Cloud Server: Major Value-Adds

Enhancement	Summary	What it means
<b>PowerVC &amp; Oracle</b>	PowerVC enables customers to create & tear-down database servers at will. No DBAs or Sys Admins are needed for this.	<i>The Vendita Database Cloud Server is an enabling technology for “DevOps” or “Shadow IT” initiatives &amp; on-premise private cloud.</i>
<b>Highly Virtualized Deployments</b>	Licensing costs are conserved through the use of multiple DLPARs on a single server.	<i>Using PowerVM, Processors can be pooled, reducing overall Oracle licensing costs.</i>
<b>EnterpriseDB on PowerLinux</b>	EnterpriseDB is a 100% Oracle compatible database available on Vendita DCS, on Red Hat Linux on IBM Power Systems™.	<i>A lower cost, yet high performing alternative to Oracle is available on the Vendita Database Cloud Server (DCS).</i>
<b>Precise Workload Estimate</b>	Using MPG Performance Navigator, existing workloads are appropriately analyzed & evaluated.	<i>Client workloads are precisely determined, which saves on Oracle licensing costs.</i>
<b>Vendita Master Automation Sequencer (MAS)</b>	Vendita MAS provides automation of server provisioning, patching & maintenance with a user-friendly UI.	<i>Enables clients to adopt Vendita DCS without worries of supporting a complex environment.</i>
